

ABCD

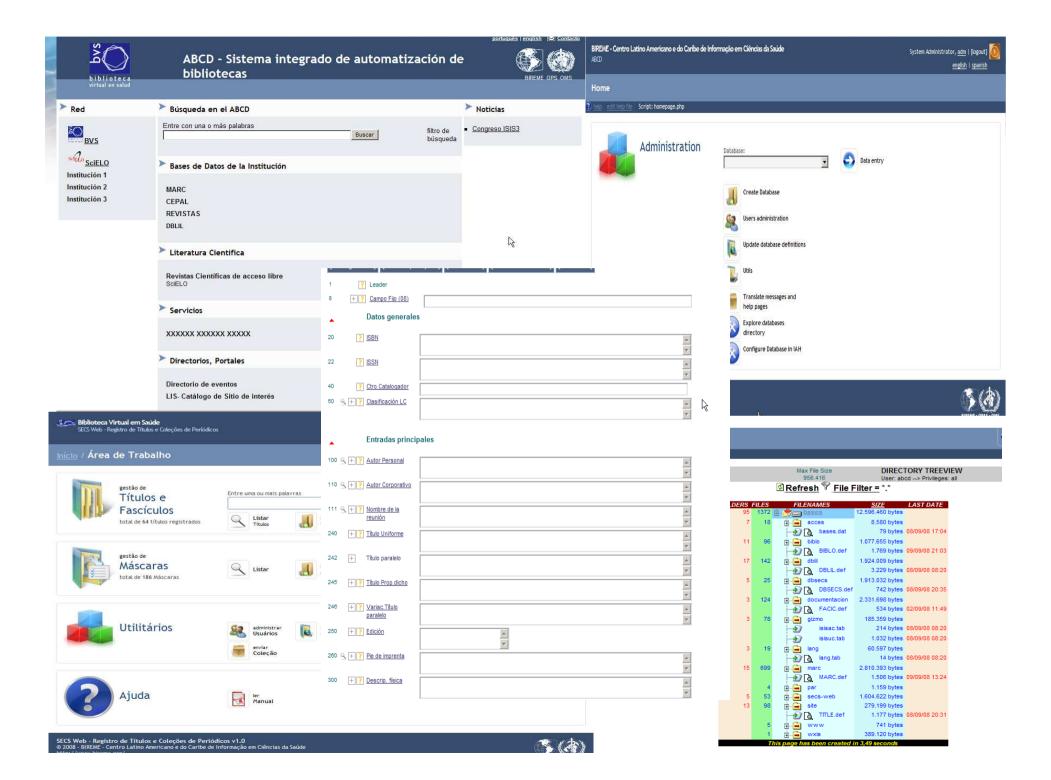

"automatización de bibliotecas y centros de documentación"

integrated library management software comprising the main basic library functions

General considerations

- Definition of any number of new databases which includes: FDT, PFT, FST, and worksheets directly on the Web, or copying from existing ones either from the Web or from Winisis on a local hard disk,
- cataloguing of books and serials, independently of the format:
 MARC, LILACS, AGRIS, etc.
- end-user searching (OPAC),
- loans circulation,
- acquisitions,
- statistics,
- library services like SDI, barcode printing, quality control ...

General considerations

- compatible with CDS/ISIS technology: reading ISIS-databases,
 ISIS Formatting Language (PFT) and indexing (FST) of records;
- both Windows and Linux platforms;
- MARC-21 cataloging formats and other current protocols (Dublin Core, METS, Z39.50...);
- Free and Open Source Software (FOSS) with the accompanying tools for the developer community;
- multi-lingual,

Data base administration module

Accepts different database structures each database has its own configuration files

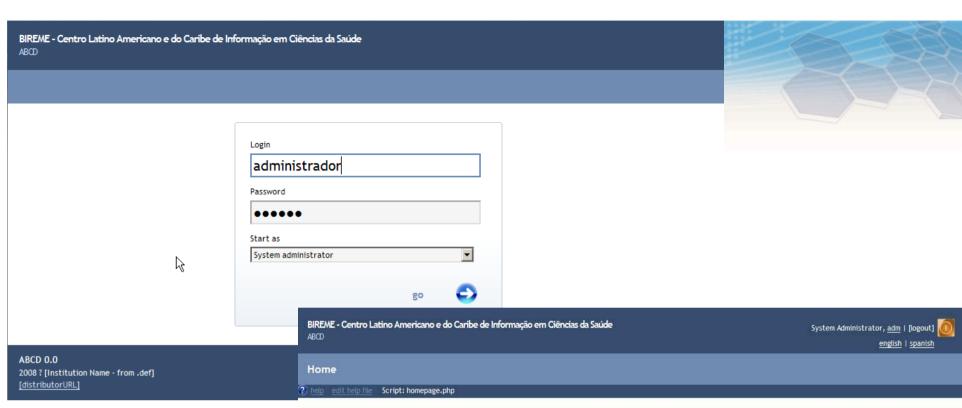

User control defining username, login, password Administrator, Operator, Librarian, end user

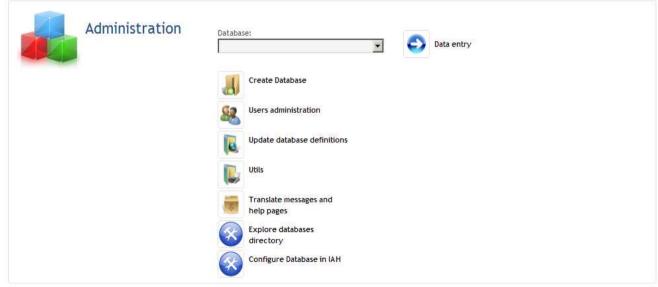

.

Data base administration module

Database creation in three modalities:

- Creating new databases in the traditional, four-step CDS/ISIS way
- Copying an existing database from the Web server, and making changes afterwards.
- Creating a database in the Web server based on a Winisis database available on the local machine. ABCD performs all the necessary conversions to the new operative environment.

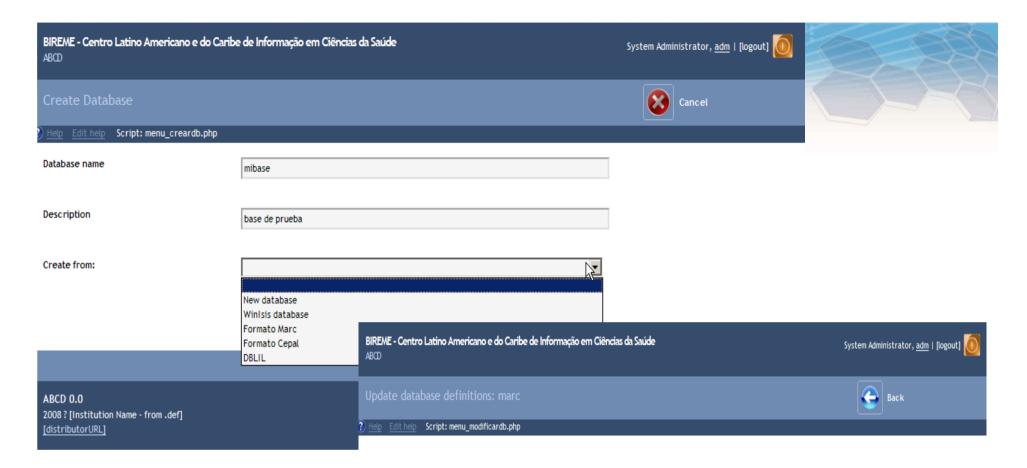

Data base administration module

- Management of multiple structures, providing templates for the separate entry of subfields. The structures can be based on MARC21, UNIMARC, LILACS, CEPAL, AGRIS, or any other adhoc structure
- Extraordinarily wide capacity to define the FDT. It is possible to use repeatable subfields, to give names to subfields and to associate special help messages, pick-lists, etc.
- Dynamic building of data entry worksheets based on specifications given in the FDT.
- Capture of controlled vocabulary through authority files, or external tables

Plenty of utilities for administration

- Field definition table (FDT)
- Field selection table (FST)
- Worksheet
- Display format (PFT)
- · Type of records Marc
- · Record validation
- Advanced Search form
- · List of available databases (bases.dat)
- dbn.pa
- Help files on the database fields
- · Configure Database in IAH

Definition of the new FDT

SODIKA

ABCD

two basic presentations three categories of users

ABCD

2 basic presentations, 3 categories of users

External users will make queries through an online public access catalogue - OPAC

The OPAC is one of the components of the ABCD Home Page The OPAC will use a customized version of Bireme's general iAH interface

Operators and administrative users

1. Administrators

Operators (technical processes, circulation, services)

- 2. Restricted to some functions and/or databases
- 3. Unrestricted in workgroup environments

ABCD basic package

Pre-defined database structures/models and services:

- Marc21 Light for all materials considered by the Library of Congress
- LILACS
- CEPAL

Demo databases

- A simple lending module
- A Users database for the lending module
- Periodicals control (Kardex database)
- TITLE database, with ISSN compatible records
- iAH working for all demos

ABCD-Home - OPAC for external users

ABCD-Home is a version of Bireme's BVS Site adapted to ABCD. This application includes an editor which permits the maintenance of the site without needing a web programmer.

ABCD-Home comes with three optional columns:
Information Network / Information Sources / News Network.
The Information Sources column will include a meta-searcher covering all databases registered in ABCD-Home

Basic products delivered with the Information Sources column of ABCD-Home:

- demo databases: MARC21, LILACS, CEPAL, CDS
- Catalogue of the periodicals holdings
- Interaction of the OPAC with the Circulation system
- Requests for online services

ABCD - Integrated Library System

summary of functionalities beta version

Admin Management of User accounts

Full database creation process

Backup/Restore

Inverted file generation/update

Database reinitialization

Record/database unlocking

Maintenance of Messages database and translation to

other languages

Creation of Help-in-context pages

Management of z39.50

Management of OAI

Quality and consistency controls

Technical processes	Data entry Creation/editing of worksheets Creation/editing of formats for quality control Linking to Authority files Management of the Acquisitions module Import/Export (Isis, MARC, XML) Global changes
Statistics	Pre-defined basic package with the most frequently used statistics Ad-hoc reports generator, direct output to graphs and spreadsheets
Services	Print generation (on demand or scheduled) Printing of barcodes and spine labels Selective dissemination of information through profiles Online services by demand (photocopies, reference)

Loans circul	Admin	Databases for identification of loan objects and users Definition of service policies or rules Multiple display formats Pre-defined calendar for calculating suspensions, reservations and loans Assignation of different functions to different operators
		Definition of lending slips and other prints
		Detection of inconsistencies in transactions
		Statistics on all types of transactions
	Oper	Loans
		Devolutions
		Reservations
		Verification of user and/or object
		Administration of fines
		Administration of suspensions
		Administration of reservations and waiting lists
		Listings of printed forms and e-mails

ABCD- Site	Admin	Simple editor for ABCD-Site administration, modelled on BVS Site
OPAC (iAH)	Admin	Editor for parameter definition (.def files) Editor for display formats Editor for indexing techniques (.FST) Web service connecting the OPAC with the loans system Editor for shortcuts (calls to external applets through .pft)

Kardex Periodical Control (SeCS)	Admin	Title creation according to the ISSN standard Import of titles from .ISO MARC/ISSN formats or native SeCS Creation of frequency masks for automatic generation of new issues Generation of collective catalogues with multiple collections
	Oper	Entry of new issues, manually or automatically through barcode reading Export of full or selective collections Control listings of missing or duplicated issues Hypertext navigation between different versions of families of titles
